McAfee Network Security Platform 8.3

Revision A

Contents

About this release

This document contains important information about the current release. We recommend that you read the whole document.

> ℹ This is a hotfix release. Automatic upgrade from previous software versions to this hotfix is not supported. McAfee recommends that you work with McAfee Technical Support to apply the hotfix files in your environment.

Release date —December 26, 2016

Release build — Network Security Manager software version: 8.3.7.32.1

Resolved issues

These issues are resolved in this release of the product. For a list of issues fixed in earlier releases, see the Release Notes for the specific release.

The following table lists the resolved Manager software issues:

ID #	Issue Description
1173256	The Manager fails to load all the pages from the Internet Explorer browser.
1172947	The Manager action to delete a Snort signature fails.
1171996	Quarantining an endpoint fails if the list of IPv4 quarantine rules exceed 1000.
1171329	After a Manager upgrade, the **Programs and features** section in the **Control panel** displays two entries for the installed Manager.
1169801	The Manager fails to import Snort rules.
1169061	The device integrated with the NTBA appliance is not displayed in the device list under **Devices	<Admin Domain Name>	Devices**.
1169060	Validation error occurs when importing Snort rules from the Custom Attack Editor.
1168909	Case insensitive "i" modifier of the Perl Compatible Regular Expressions (PCRE) in the Snort rules cause false positives.
1168732	Import of Snort rules having characters "\&" causes error.
1166951	The Manager's integration with the Advance Threat Defense appliance (ATD) fails after an ATD upgrade.
1165777	Connectivity failure occurs between the Manager and the Advance Threat Defense appliance.
1151225	The malware confidence (severity) for the same alert displays inconsistent value in the Manager(**Attack Log**, **Alert Details**, and **Malware Files**) and Syslog Message.
1147762	The Manager imports expired SSL certificate and even displays it as "valid".
1083810	The **Quarantine** page in the **Analysis** tab displays quarantined endpoint information even after releasing the endpoints from quarantine.

Installation instructions

See *Network Security Platform 8.3 Installation Guide* for information on how to install the Network Security Platform software.

This is a hotfix release; and not a full maintenance release.

The attached files are provided as is, and with no warranty either expressed or implied as to their suitability for any particular use or purpose. McAfee, Inc. assumes no liability for damages incurred either directly or indirectly as a result of the use of these files, including but not limited to the loss or damage of data or systems, loss of business or revenue, or incidental damages arising from their use. Hotfix files should be applied only on the advice of McAfee Technical Support, and only when you are actually experiencing the issue being addressed by the hotfix. Hotfix files should not be proactively applied in order to prevent potential product issues. You are responsible for reading and following all instructions for preparation, configuration, and installation of hotfix files. Hotfix files are not a substitute or replacement for product Service Packs which may be released by McAfee, Inc. It is a violation of your software license agreement to distribute or share these files with any other person or entity without written permission from McAfee, Inc. Further, posting of McAfee hotfix files to publicly available Internet sites is prohibited. McAfee, Inc. reserves the right to refuse distribution of hotfix files to any company or person guilty of unlawful distribution of McAfee software products. Questions or issues with McAfee hotfix files should be directed to McAfee Technical Support.
